

The patented **IMTEC** FLEXISEAL Access Doors and related gaskets are designed to last the life of the equipment they serve. **IMTEC** has over 3700 doors in service in applications such as Boilers, Boiler Penthouses, Economizers, Scrubbers, Baghouses, Wind Boxes, and Stacks. **IMTEC** FLEXISEAL Access Doors can be opened in less than one minute without the use of tools. They are flush inside and out to prevent material build-up. The safety latch prevents injury and entrapment of personnel. The sag rod allows adjustment for alignment as the equipment ages. They install quickly and easily in a new or retrofit application. They assure that tightness and adequate insulation is accomplished automatically, outage after outage without the need for tools and constant door repairs. Standard models are available for all temperatures and gas pressures.

Renewal of gaskets, re-welding of rusted or broken lugs and struggling with flimsy, poor fitting insulation covers is unacceptable with good access doors.
